BOHN SYPHON REFRIGERATORS

The Bohn Dry-Air Syphon Porcelain Enamel-Lined Refrigerator

Is constructed on scientific principles, combined with high-grade workmanship and first class material throughout.

We claim superiority and challenge comparison and competition on the following points:

- (1) Low and uniform temperature.
- (2) Pure atmosphere.
- (3) Ease in keeping absolutely sanitary.
- (4) Perfect circulation and absence of odors.
- (5) Freedom from moisture.
- (6) Economy in the consumption of ice.
- (7) Perfect drainage.
- (8) Porcelain enamel lining of provision chambers.
- (9) Durability of construction and general appearance.

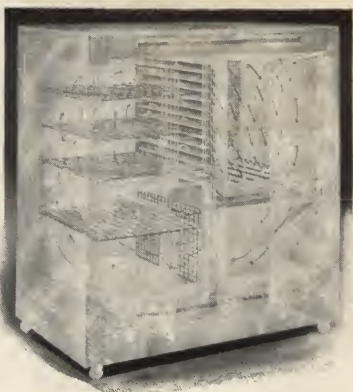

Workmanship and Lining of Provision Chamber

Our construction is such as other manufacturers would call extravagant, but they do not pay the ice bills. We could save about half the expense in building our walls and linings cheaply, but our object has been to make an ideal refrigerator from a practical and scientific standpoint. It could not be better made, and is much better than is necessary to effect sales; but we take pride in producing an article of merit and efficiency. The provision chambers are all lined with **porcelain enamel**, so that when food is placed on the shelves it looks as appetizing as if set on your table linen. There is no darkness, but you can plainly see the contents and are won at once by the inviting appearance. When a woman glances into the **Bohn Syphon Porcelain Enamel-Lined Refrigerator** she desires possession, and yet may not know anything of its **scientific principles**, except that it looks clean and inviting.

The Syphons that divide the provision chamber from the ice chamber are constructed of heavy galvanized iron, which cannot break or get out of order. This partition is enameled by our own process.

Copyrighted, 1907, by the White Enamel Refrigerator Co.

BOHN SYPHON REFRIGERATORS

Syphons and Circulation

Our Syphons of heavy galvanized iron are constructed on a scientific principle which is an adaptation of nature's law of circulation.

By means of these Syphons we produce rapid and unobstructed circulation, resulting in the absolute dryness of the circulating air, absence of all offensive odors which, as a result of the rapid circulation, are deposited upon the ice and pass off through the drain-pipe, and an average low temperature not obtainable in any refrigerator of other construction.

The accompanying cut illustrates in a clear and simple manner the circulation of the air, and at the same time shows the internal construction of the *Bohn Syphon Refrigerator*.

Note the construction and arrangement of the Syphons.

The open throat presents an unobstructed passage for the free circulation of air between the ice and provision chamber.

This is most important.

So easy to keep clean—no corners or angles for the accumulation of dirt.

Just wipe off with a damp cloth, and you can see that it is clean.

Microbes and heat—spoil the meat. Buy a Bohn.

BOHN SYPHON REFRIGERATORS

WE SELL ON APPROVAL

As you may not see these refrigerators before buying, we protect you. If the refrigerator does not give satisfaction as per our guarantee given below, we do not require you to keep it. We prefer your good-will to your money.

TERMS

Where we are represented by a regularly-appointed agent, we invariably refer inquiries to the local dealer. Where not represented, our terms are cash with order, bank-draft or express money order preferred.

Individuals or firms who are rated favorably in Dun's or Bradstreet's Commercial Agency may order and remit upon receipt of goods.

If we receive an order, unaccompanied by remittance to cover, from persons not satisfactorily rated in Dun's or Bradstreet's, we will, in all cases, ship goods C. O. D., draft attached to bill-of-lading. You may be thoroughly responsible, but if a stranger we cannot know it.

GUARANTEE

We guarantee the **Bohn Dry-Air Syphon Refrigerator** to be just as represented by us. If, after ten days' trial, observing carefully our printed instructions, yours should not do all we claim for it, upon notice from you we will make good any deficiency, or take back the refrigerator, and refund your money and pay freight both ways.

Yours truly,

THE WHITE ENAMEL REFRIGERATOR CO.

BOHN SYPHON REFRIGERATORS

Please Observe Carefully

Always Keep the Ice Chamber Full of Ice.

THIS IS ECONOMY

When the ice gets low in the ice chamber, circulation is retarded, and under such conditions the refrigerator cannot possibly operate in a satisfactory manner. The more ice there is in the ice chamber, the more perfect the refrigeration, and there will be less meltage of ice, for the simple reason that if the air in the provision chambers is kept at a low temperature, there is no warm air to melt the ice.

NEVER PUT ANYTHING BUT ICE IN THE ICE CHAMBER

Placing flowers, provisions or liquids in an open receptacle in the ice chamber not only causes rapid meltage of ice, but is absolutely unhealthy, as the odors passing over in circulation from the provision chambers will naturally be deposited upon such provisions in the ice chamber, and the cause of much sickness can be directly traced to this custom, which is only too prevalent and should be absolutely guarded against.

In case the ice should be consumed at any time and the refrigerator become warm, all its contents should be removed and the refrigerator thoroughly cleaned, then refill the ice chamber as at first and let the same stand with the doors closed for six hours, then refill the ice chamber and replace the provisions in the provision chambers.

Attention to these instructions will save much annoyance on the part of the users and considerable reduction in the consumption of ice.

BOHN SYPHON REFRIGERATORS

Vitreous Enamel (Porcelain) Lined Refrigerator, All White, In- side and Outside

THIS is a refrigerator which we are furnishing with the new vitreous enamel or porcelain material, having the same outside appearance as that given to the provision chambers in the refrigerators outlined above, the same material being used for the outside of the case. The case is trimmed with nickel-plated strips.

These refrigerators are numbered in this catalog, No. 53 to 58 inclusive. On pages 17, 18, 19, 20 and 21 we are showing five different sizes of this style of refrigerator—our Nos. 53, 53 $\frac{1}{4}$, 54, 55 and 57.

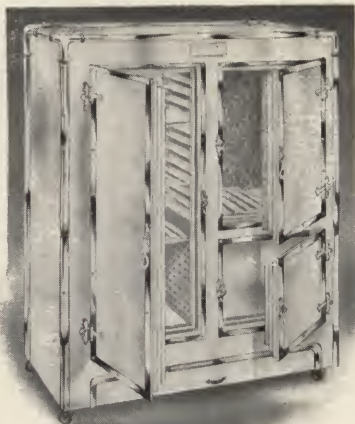

This is a refrigerator of an exceptionally beautiful design and must appeal to those whose artistic taste demands something different from the ordinary. It has met with an unusual demand.

The general construction of the walls of this refrigerator is the same as that used on all of the different styles of Bohn Syphon Refrigerators, with the exception that the woodwork here is covered with vitreous enamel or porcelain plate in place of the paneled case ordinarily furnished.

We also build these refrigerators to order.

Blue-prints of special designs upon request.

BOHN SYPHON REFRIGERATORS

Why have the Pullman Company and all the great railroads adopted the Bohn Syphon System of Refrigeration? Because, after several tests, it has proven superior to all others.

The following railroads Have Equipped Their Dining, Buffet and Refrigerator Cars With Our System:

The Pennsylvania Lines

Pennsylvania Railroad

Chicago, St. Paul, Minneapolis & Omaha

Chicago, Burlington & Quincy

Chicago, Milwaukee & St. Paul

Chicago & Eastern Illinois

New York, New Haven & Hartford R. R.

Northern Pacific

Missouri Pacific

Southern Pacific

Canadian Pacific

Atchison, Topeka & Santa Fe

Illinois Central

Michigan Central

Wisconsin Central

Western Ry. of Alabama

Atlanta & West Point

Great Northern

Southern Railway

Norfolk & Western

Union Pacific

Pullman Car Company

Minneapolis, St. Paul & Sault Ste. Marie

Chicago & Alton

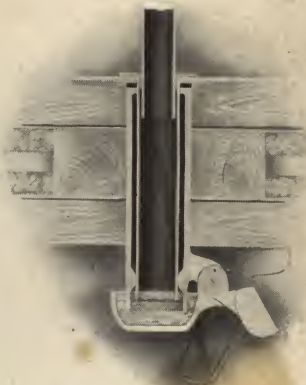

Chicago, Rock Island & Pacific

Louisville & Nashville

New York Central & Hudson River

New York, Chicago & St. Louis

BOHN SYPHON REFRIGERATORS

Economy in Consumption of Ice

Insulation is the keynote of a refrigerator's efficiency. Lacking insulation, the most elaborate appearing refrigerator is useless. Special attention has been devoted to attain the most *perfect* insulation in the *Bohn Syphon Refrigerator*.

After years of practical experimenting, we have rested satisfied that we have attained *perfection* in insulation.

A practical combination of non-conducting, non-absorbent material and dead-air space.

Ten thicknesses of insulation.

Freedom From Moisture

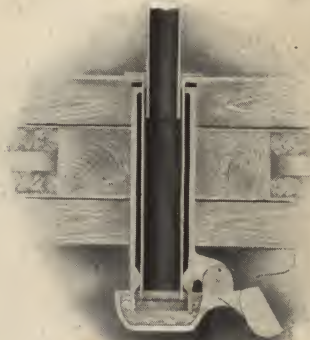

Dampness causes food to become stale and moldy, and, consequently, unwholesome.

In the *Bohn Syphon Refrigerator* it is impossible for moisture to accumulate on the walls of the provision chambers. In fact, our porcelain enamel-lined refrigerators are drier than the external atmosphere.

An experiment will demonstrate that a wet cloth suspended in the provision chamber will become dry in a shorter time than if hung in the outside air.

You can bet—it won't sweat
